To check the accuracy of the shelter data you've compiled, the Beginning Shelter Count (A) plus the Adjusted Total Intake (H) should equal the Total Outcomes (V) plus the Ending Shelter Count (W): $A + H = V + W$.

COMMENTS: Nevada Humane Society changed shelter management software in 2008 and there were some challenges with the data conversion. While we are confident that our ending shelter count is correct, our beginning shelter count is estimated. Shelter counts include animals in foster and hospice care.

I agree that in completing this form, we have used the Maddie's Fund definitions of "Healthy," "Treatable - Manageable," "Treatable - Rehabilitatable," and "Unhealthy & Untreatable" as set forth in the attached document titled, "Maddie's Fund® Categorizations/Definitions of Shelter Animals."
